industries. IBM cards resulted from this analysis also.

The two types of files ^{were} maintained by GR for films, ~~were~~
 a. ^{of the} Card index on accessioned films consisted of three separate files;
 the main file ^{of} recorded all films on file or on short-term loan; the loan file for
 long-term loans (more than six months); and the dead file ^{of} showing films destroyed or
 returned to their sources.

b. ^{to the} Master alphabetical card file on all films received was arranged
 by film title and indicated, as one example, the number of times a film was rented
 or borrowed, an important factor in determining whether to accession a film
 permanently.

c. Subsequent Processing Developments

Insert Because of the very nature of the material it handled, GR had to
 use a manual approach to its storage and retrieval problems. As the other Divisions
 of OCR were involved in the continuing search for improvement in this area, so GR
 had to follow current developments in automation to see what aspects it could adopt.

ILLEGIB

One aspect was begun in FY1959 with OCR participating in a CODIB-sponsored review
 of photographic processing priorities. ^{25X1B} With GR already concentrating on ^{25X1B}

^{25X1B} prospects for a satisfactory solution of the backlog problem were not
 promising. ^{25X1B} ILLEGIB
